helpful. Five StarsBy Zainal ArifinVery usefull to know about precious metals.1 of 1 people found the following review helpful. Jewelry MetalsBy Anne S.This book is everything I was expecting it to be. Well researched, Renee gets right to the point, and knows what she is doing. I would recommend it to anyone who is interested in metal jewelry.

A full-colour guide for lay people and professionals about gold, platinum, palladium, silver, copper, bronze, brass, iron, titanium, niobium, aluminium, stainless steel, Damascus steel, tungsten carbide and cobalt chrome. This book explains how to test, buy, sell, and care for jewellery with precious and alternative metals. High-quality colour photographs show how these metals are creatively used in jewellery. Besides providing an historical perspective and interesting facts about the metals, this book discusses jewellery manufacturing methods, plating and responsible mining business practices. You will learn: How to read the stamps on jewellery mountings; How to identify jewellery metals; How to determine the gold content in jewellery; How and where to sell your unwanted jewellery; How to spot a fair consignment contract; How to select refiners and prepare shipments to them; How to prevent and remove silver tarnish; How to clean metal jewellery.

Congratulations on a wonderful job! You have managed to include a tremendous amount of very useful information on a very expensive and potentially dry subject, while staying concise, interesting and even entertaining. Honestly, I learned a great deal about metals I did not know--so much that this book will now be with me on the job at all times a primary reference. --Dan Kapler, Refining Sales Manager, David H. Fell Company, Inc., Los Angeles, CAWhat a fascinating book! I've been in the jewelry business since 1972 and yet even with all that experience, your book provided new insights. --Chris Booth, Exotica Jewelry, Clarkdale, AZI must say that you have put together a well-crafted tome. Your book is very informative easy to read understand. You have obviously done your research clearly know much more about metallurgy than the average person in the industry, certainly more than I know! Unless you wanted to add a chapter about refining, there is nothing I would change or could add to what you have written. Kudos!! --Lee J. Thompson, Jewelers Refining Group, Inc., New York City, NY
