Texas Oil and Gas documents in postcards the rapid growth of the Texas petroleum industry from its beginnings near Corsicana in the 1890s through the next several decades of oil booms throughout the state. The young 20th century opened with the Lucas Gusher at Spindletop in 1901. Thousands rushed from the oilfields of Pennsylvania, Ohio, and West Virginia to find work and riches. Continued drilling success along the Texas Gulf Coast transformed Houston

into a major city and the Beaumont area into a major petrochemical center. Through the 1910s and 1920s, oil booms occurred in North Texas, the Panhandle, Central Texas, and West Texas. The giant East Texas oilfield, the second largest North American oilfield to Alaskas North Slope, was discovered in 1930. Texas oil replaced coal as fuel for the nations railroads and provided fuel for our military in two world wars.

About the Author Author Jeff A. Spencer, a petroleum geologist and oilfield historian, has authored several papers using vintage postcards to illustrate the petroleum industrys history and growth. He currently serves as a vice president of the Petroleum History Institute and is coauthor of Arcadias Images of America: Ohio Oil and Gas.
